PORTFOLIO

PRODUCT / AI / DELIVERY

I turn complex problems into AI-enabled experiences, services and user journeys.

I work where business design, AI systems and hands-on delivery meet-turning ambiguity into decisions,usable products and experiences that help teams move with clarity.

SIGNATURE IMPACT

AI / 01

Agentic Experiences & AEO

I design connected agent workflows, conversational AI and AI-readable information structures so people can discover, navigate and act with confidence.

GCC / 02

Product infrastructure

Operations to GCC market entry.

LIVE / 03

Web Summit Qatar

Experience strategy and live delivery.

PORTFOLIO SNAPSHOTS

SYSTEMS

Operational products

0-to-1 workflows, role-based dashboards and service logic that make complex work easier to run.

TOOLS

Community tooling

Reusable skills, Figma plugins and design-system contributions that help teams work with more clarity and speed.

BUILD

Design engineering

Figma, React and Tailwind used as one continuous loop from product intent to working interface.

Strategy becomes stronger when it lands in a system people can use.

I connect the strategic question to the working answer - with AI design ed in to the work, not added at the end.

01

Insight to direction
Research, stakeholder conversations and journey mapping translated into a clear service model, decision and next move.

02

Make AI useful
Agentic flows, conversational AI and AEO designed around real tasks, controls and human decisions.

03

Ship the answer
Strategy carried through prototype, product interface, front-end build or a live experience - without losing intent.

AI-ENABLED PRACTICE

CORE STACK

From systems thinking to execution
AI agents / AEO / conversation design / service blueprints / information architecture / design systems / Figma / React / Tailwind / EN-AR & RTL delivery

WORKING STYLE

Grounded, visible, buildable
I make the work legible for the people who need to decide, operate, build and use it.

EXPERIENCE, IN CONTEXT
